machine learning is one of the most promising applications of Oct 08 2020 machine learning is one of the most promising applications of quantum algorithms this area was pioneered by the hhl algorithm that in some cases can solve systems of linear equations in both cases our results set explicit limits to the range of parameters for which a quantum advantage can be envisaged with adaptive linear optics compared to classical machine

complex numbers full chapter pdf Sep 06 2020 solution let $a \in \mathbb{C}$ the set of complex numbers with the above addition and multiplication rule is a proof is long and tedious but elementary note $0 = 0i$ this means we can perform complex number arithmetic as usual $n b c$ extends the real number system since complex numbers of form $a + bi$ add and multiply just like real

quantum logic gate wikipedia Dec 22 2021 quantum logic gates are represented by unitary matrices a gate which acts on qubits is represented by a unitary matrix and the set of all such gates with the group operation of matrix multiplication is the symmetry group $U(2^n)$ the quantum states that the gates act upon are unit vectors in complex dimensions with the complex euclidean norm the 2 norm

2 de set de 2022 consider a box where no one can see what s Nov 08 2020 from this we can conclude that if the statement in this article the solution of algorithm x pseudo code will be demonstrated using examples from the programming language 1 if the matrix a has no columns the current partial solution is a valid solution terminate successfully 2 otherwise choose a column c deterministically 3
