The Inhibitor Index Apr 27

2022 Metabolic inhibitors and
receptor antagonists are
indispensable tools for the
molecular life scientist. By
blocking specific enzymes or
receptor-mediated signal
transduction cascades, they
simplify the analysis of complex
cellular processes especially
when it is essential to
demonstrate that a process of
interest is functionally linked to
a particular enzyme or
receptor. From antibiotics to
statins, modern medicine relies
on the reliability and ease-of-
use of enzyme- and receptor-
directed inhibitors and
antagonists. The Inhibitor Index
is a comprehensive, curated

compendium of over 7,800 enzyme inhibitors and receptor antagonists, including many toxins, poisons, and metabolic uncouplers.

Who's who in New York City and State Jul 19 2021

Containing authentic biographies of New Yorkers who are leaders and representatives in various departments of worthy human achievement including sketches of every army and navy officer born in or appointed from New York and now serving, of all the congressmen from the state, all state senators and judges, and all ambassadors, ministers and consuls appointed from New York.

Remaking the Concept of Aptitude Sep 28 2019 The unique perspective of Richard E. Snow, in recent years one of the most distinguished educational psychologists, integrates psychology of individual differences, cognitive psychology, and motivational psychology. This capstone book pulls together the findings of his own 35 years of research on aptitudes and those from (especially) European scholars, of which he had exceptional knowledge. A panel of experts and former associates completed this book after his death in 1997, expanding his notes on implications of the theory for instructional design and

teaching practice. The panel developed Snow's ideas on where the field should go next, emphasizing promising research strategies. Viewing intelligence as education's most important product, as well as its most important raw material, Snow stressed the need to consider both cognitive skills and affective-motivational characteristics. In this book, previously unconnected research and scattered theoretical ideas are integrated into a dynamic model of aptitude. Understanding the transaction between person and situation was Snow's primary concern. This volume draws from diverse resources to construct a theoretical

model of aptitude as a complex process of unfolding person-situation dynamics. Remaking the Concept of Aptitude: Extending the Legacy of Richard E. Snow: *presents historical and contemporary discussion of aptitude theory, illuminating recent ideas by pointing to their historic antecedents; *provides evidence of how sound research can have practical ramifications in classroom settings; *discusses the strengths and weaknesses of prominent research programs, including Gardner's "multiple intelligence," meta-analysis, ATI experiments, and information processing; *describes in detail specific

research that has developed important concepts--for example, Csikszentmihalyi on "flow"; Lambrechts on success in stressful training; Sternberg on componential analysis; and Gibson on tailoring affordances to match motivations; and *keeps statistical complexities to a minimum, and includes a simply written Appendix that explains the interpretation of key technical concepts. By characterizing sound research in the field, this volume is useful for psychologists and educational researchers. It will also be instructive for teachers seeking to deepen their knowledge of the whole child and for parents of children facing standardized testing.

memory studies, one of the principle areas of expanding research in applied cognitive psychology. The books arose from the 2nd International Conference on Aspects of Memory held in Swansea in August 1987 - the first

conference was held ten years ago - and contained selected and refereed papers from eminent psychologists working in the field of memory, and actively engaged in applied memory research.
