The Transfer of Taxes from Money-lenders to Business and Labor Dec 18 2021

Beyond the Marketplace Sep 03 2020 *Beyond the Marketplace* is an interdisciplinary view of the relationship between markets and society. Do individuals behave in markets as

neoclassical theory assumes they do? Can other social institutions and processes--e.g., family formation and voting behavior--be analyzed with the same analytic tools we use to study markets? How is economic behavior shaped by institutions beyond the marketplace? Do markets themselves have a social and

cultural structure which is not adequately explained by the formal tools of neoclassical analysis? In Beyond the Marketplace, economists, sociologists, political scientists, historians, and anthropologists respond to these, and related, questions.

Distance in International Business Feb 08 2021 The twelfth volume in the Progress in International Business Research series presents extensive accounts of the contemporary scientific debate on how to assess the impacts of distance, both negative and positive ones, on the conduct of international business.

International Business Review Nov 24 2019 *Strategy, Economic Organization, and the Knowledge Economy* Jul 21 2019 The advent of the knowledge economy changes the ways in which firms organise their activities and how they strategize in the market place. This non-technical volume lays the foundations for an analysis of these phenomena. The

discussion is both theoretical and empirical.
Science, Business and Universities Nov 17 2021 Cooperation between science and business (S2B cooperation) is a very important issue from the points of view of the domestic economy, companies, and universities. This is mainly because such cooperation is a catalyst for faster and reliable development - not only of enterprises, but also of the entire economy. Thanks to S2B cooperation, enterprises can gain and commercialize new and ground-breaking solutions. Universities in turn can give their research a more practical dimension to increase its economic applicability, which helps universities prepare future staff to work in modern enterprises. The aim of this publication is to indicate how cooperation between universities and business can be implemented in an international dimension. It shows the role of modern universities in supporting the development of enterprise and entire economies as well as the

role of modern enterprises that use resources located in universities (including knowledge resources). This unique combination has a positive impact on the results and developmental opportunities for each of them. Any potential obtained in this manner is the basis for creating a competitive advantage on the market. This book is devoted to a specific area of cooperation between enterprises and universities and will be of interest to researchers, academics, practitioners, and students in the fields of entrepreneurship, knowledge management, international relations, and higher education.

Liquidity and Crises Jan 07 2021 Financial crises have been pervasive for many years. Their frequency in recent decades has been double that of the Bretton Woods Period (1945-1971) and the Gold Standard Era (1880-1993), comparable only to the period during the Great Depression. Nevertheless, the financial crisis that started in the

summer of 2007 came as a great surprise to most people. What initially was seen as difficulties in the U.S. subprime mortgage market, rapidly escalated and spilled over first to financial markets and then to the real economy. The crisis changed the financial landscape worldwide and its full costs are yet to be evaluated. One important reason for the global impact of the 2007-2009 financial crisis was massive illiquidity in combination with an extreme exposure of many financial institutions to liquidity needs and market conditions. As a consequence, many financial instruments could not be traded anymore, investors ran on a variety of financial institutions particularly in wholesale markets, financial institutions and industrial firms started to sell assets at fire sale prices to raise cash, and central banks all over the world injected huge amounts of liquidity into financial systems. But what is liquidity and why is it so important for firms and financial institutions to

command enough liquidity? This book brings together classic articles and recent contributions to this important field of research. It provides comprehensive coverage of the role of liquidity in financial crises and is divided into five parts: (i) liquidity and interbank markets; (ii) the public provision of liquidity and regulation; (iii) money, liquidity and asset prices; (iv) contagion effects; (v) financial crises and currency crises.

Existing Share Transfer Mechanism in Ethiopia.
Challenges and Benefits
Aug 26 2022 Master's Thesis from the year 2020 in the subject Business economics - Investment and Finance, grade: Excellent, , course: Financial Markets, language: English, abstract: The overall aim of this study was to assess what the existing share transfer mechanism in the private banking companies in the absence of secondary stock market in Ethiopia is, along with its related challenges and benefits. The information was obtained from 12 purposively

sampled private banking companies by adopting descriptive research design. Semi structured questionnaires were administered to 153 respondents from which 43 were all share department expertise and 110 were conveniently selected shareholders from those banks and interviews also administered for share department directors of those banks. The questionnaires covered the key aspects of what options are there to transfer shares in the absence of secondary stock market in Ethiopia and related challenges and benefits. The main conclusions of the paper were: despite the absence of secondary stock market in Ethiopia shares can be transferred between investors through different ways includes by purchase through the help of share department employees of the companies, by descendant's if the transfer is sequestration, and through court order at the time of debt settlement, divorce, death. Difficult to know market value

of shares, less marketability, inaccessibility of information about share trade were the major challenges with the existing share transfer mechanism that existed in private banking companies in the absence of stock market in Ethiopia. Generally the findings suggest that shares of the private banking companies can be transferred between investors in the absence of stock market in Ethiopia. Some recommendations were given from those the banks should open formal office to act as an agent for share transfer purpose for their shareholders by doing so the banks can enhance the transferability of shares.

Alliance Capitalism and Global Business Dec 06 2020

Placing the evolution of alliance capitalism in the context of the globalizing economy, John Dunning explores the consequences of the economic and political events of the past twenty years for the economic jurisdiction of firms, markets and nation states, their impact on the structural organization of firms and on the domestic policies of national governments. The volume includes some personal reminiscences by the author about the evolution of his ideas and writings over the last thirty years and a comparative look at US and Japanese FDI in Europe. The volume also

includes an evaluation of the current, and likely future, foreign MNE activity in Japan. The volume concludes with some forward-looking insights by the author into the paradoxes at the contemporary globalizing economy and of how these might be managed or resolved.

International Taxation and Multinational Activity Jun 19 2019 Because the actions of multinational corporations have a clear and direct effect on the flow of capital throughout the world, how and why these firms behave the way they do is a major issue for national governments and their policymakers. With an unprecedented ability to adjust the scale, character, and location of their global operations, international corporations have become increasingly sensitive to the kind and degree of tax obligations imposed on them by both host and home countries. Tax rules affect the volume of foreign direct investment, corporate borrowing, transfer pricing, dividend and royalty

payments, and research and development. National governments that tax the profits of international firms face important challenges in designing tax policies to attract them. This collection examines the global ramifications of tax policies, offering up-to-date, theoretically innovative, and empirically sound perspectives on a problem of immense significance to future economic growth around the globe.

Deep Smarts Jul 25 2022 Deep smarts are the engine of any organization as well as the essential value that individuals build throughout their careers. Distinct from IQ, this type of expertise consists of practical wisdom: accumulated knowledge, know-how, and intuition gained through extensive experience. How do such smarts develop? And what happens when people with deep smarts leave a particular job or the organization? Can any of their smarts be transferred? Should they be? Basing their conclusions on a multi-year research project, Dorothy Leonard and Walter

Swap argue that cultivating and managing deep smarts are critical parts of any leader's job. The authors draw on examples from firms of all sizes and types to illustrate the connection between deep smarts and organizational viability and continuous innovation. Leonard and Swap describe the origins and limits of deep smarts and outline processes for cultivating and leveraging them across the organization. Developing an experience repertoire and receiving strategic guidance from wise coaches can help individuals move up the ladder of expertise from novice to master. Addressing a topic of increasing importance as the Boomer generation retires, Deep Smarts challenges leaders to take a hands-on approach to managing the experience-based knowledge shaping the future of their organizations.

The Financial Implications of Releasing Small Firms and Small-volume Contributors from Superfund Liability Mar 09 2021 Recent congressional proposals to reform the federal Superfund program release potentially responsible parties (PRPs) that are small in size or that only played a minor role at the site from liability for cleanup costs. These reforms transfer the cleanup costs of parties released to the Superfund Trust Fund. This report estimates the number of PRPs that would be released and the cleanup costs that would be transferred to the Fund by recent proposals. It also estimates the costs transferred to the Fund per firm released and the financial consequences for those PRPs

that remain liable. Releasing from liability firms that contributed only a small proportion of the waste to a site appears to be more cost-effective than releasing small firms. In addition, although there is evidence that large firms will benefit from the transfer of small firms' costs to the Fund, the effect of such a transfer is ambiguous. Implementing reforms that would release small firms or small-volume firms and transferring their volume-based cleanup costs to the Fund may prove costly in terms of additional transaction costs.

Cooperation, Clusters, and Knowledge Transfer Feb 20 2022 Cooperation and clusters have become the guiding paradigms for explaining and promoting regional competitiveness, but the cooperation process between firms and universities and the transfer of knowledge in guiding and nurturing regional competitiveness has received relatively little attention. This book strives to fill this gap in highlighting the connection

between inter-firm cooperation in regional clusters, innovation and regional networks, and the role of universities in them . It goes beyond the traditional economic approach of clusters and includes 'soft factors' in the explanation of regional competitiveness, and connects the literature on clusters to the literature of learning and knowledge creation as sources of regional competitiveness. It aims to foster an international and interdisciplinary exchange of perspectives by presenting current developments, case studies, best practices as well as new integrated theoretical approaches and applications.

The Improvement of Technology Transfer Jun 12 2021 Based on the results of an empirical study on technology transfer between Graz University of Technology and companies in Styria, Franz Hofer sets up a typology which classifies university researchers and companies according to the current extent and barriers of their technology transfer. recommendations for the different groups which enables them to initiate and further improve technology transfer. In addition, he provides new insights and data to compare technology transfer in Styria with other regions.

Fundamentals of International Transfer Pricing in Law and Economics

Jul 13 2021 The taxation of multinational corporate groups has become a major concern in the academic and political debate on the future of international taxation. In particular the arm's length standard for the determination of transfer prices is under increasing pressure. Many countries and international bodies are now taking a closer look at the use of transfer prices for profit shifting and are exploring alternative mechanisms such as formulary apportionment for the allocation of taxing rights. With regard to this topic, this volume is the first to offer a concise analysis of transfer pricing in the international tax arena from an interdisciplinary legal and economic point of view. Fundamentals such as the efficient allocation of resources within multi-unit firms and distortions between different goals of transfer

pricing as well as different aspects of it in tax and corporate law, the traditional OECD approach and practical aspects concerning intangibles, capital and risk allocation are covered by outstanding authors.

Innovation Systems and Capabilities in Developing Regions

Apr 10 2021 In today's knowledge-driven world, innovation and innovation systems have become key policy issues. However, the extent of knowledge that is available on these concepts in less developed countries is still relatively low. Much of what we know about innovation theory and systems has come

from the developed countries and reflects their world view. This apparent knowledge deficit has major implications for less developed countries. Innovation Systems and Capabilities in Developing Regions adds to the growing body of knowledge on developing countries. The theoretical and empirical case studies presented here advance the notion that, while developing countries may not engage in frontier research, a critical knowledge base upon which these countries compete for global markets is emerging. There is evidence that state and non-state actors are increasingly emphasizing policies that sit within the framework of national innovation systems. This book illuminates this shift in policy competence at national levels. The contributions in this volume highlight the need for thorough understanding of the role of diffusion-based innovation linked to technology transfer and acquisition. They also provide empirical evidence on the drivers, dynamics and

impact of such innovation in developing economies and the constraints that apply. Contributors also document the application of the innovation system approach in developing countries as well as the build-up and diffusion of technological capabilities within innovation systems. Academics, higher level students, policy makers and practitioners involved with innovation and the economics of technical change, particularly in developing countries, will find this a valuable book.

The Geography of Small

Firm Innovation Mar 29 2020

It has long been recognized that advances in science contribute to economic growth. While it is one thing to argue that such a relationship exists, it is quite another to establish the extent to which knowledge spills over within and between sectors of the economy. Such a research agenda faces numerous challenges. Not only must one seek measures of inputs, but a measure of output is needed as well to estimate the knowledge production

function. The identification of such a measure was a compelling goal for Zvi Griliches, if not the holy grail: "The dream of getting hold of an output indicator of inventive activity is one of the strong motivating forces for economic research in this area."

(Griliches 1990, p. 1669). Jaffe (1989) made a significant contribution to estimating the knowledge production function when he established a relationship between patent activity and R&D activity at the state level. Feldman and coauthors (1994a, 1994b) added considerably to this line of research, focusing on innovation counts as the dependent variable instead of patent counts. This work was particularly important given that many innovations are never patented. Feldman's work also differentiated by firm size and showed that knowledge spillovers from universities play a key role as sources of knowledge for small firms.

cultures and social institutions affecting business systems. This book explores key characteristics of firms and markets in eight European countries - Denmark, Finland, The Netherlands and Germany compared with Britain, Sweden, Italy and France. Some contributors focus on overall business patterns in the countries concerned while others examine particular industries and sectors to consider the relationship between national influences and cross-national sector developments. To provide a European/East Asian comparison one contribution looks at firms and strategies in Japan and Hong Kong.

Brazil and China in Knowledge and Policy Transfer May 31 2020 This book examines knowledge and policy transfer from the perspectives of Brazil and China. It assesses how these

two nations have emerged as providers of ideas and models that contribute to the global offer of public policies. With a variety of case studies in areas such as health, food security and infrastructure, the volume offers new insights into the distinct levels through which knowledge and policy transfers take place, including the local, regional, national and supranational. It develops a multidimensional framework of analysis that considers the agents, objects, and mechanisms for knowledge and policy transfer, as well as the structures and timings within which they operate. Unlike previous studies on policy transfer - which largely focus on North-North and North-South learning processes - this book offers an innovative approach to this area of study. By reflecting on the experiences of these two rising powers, it provides fresh insights on the future of knowledge and policy transfer as global power dynamics shift. This interdisciplinary study will appeal to students and scholars

of policy transfer, development studies, international relations and public policy.

Success Strategies and Knowledge Transfer in Cross-Border Consulting Operations Dec 26 2019

Success Strategies and Knowledge Transfer in Cross-Border Consulting Operations analyzes the international operations of consulting firms. Apart from developing a theoretical framework which differs from traditional theories about international trade, the main issues analyzed in this book are: 1) Success determinants when tendering for international consulting contracts; 2) The choice between exports, acquisition of a local firm or establishing a greenfield office when entering foreign markets; 3) The extent and nature of knowledge transfer to emerging markets; 4) The role of development agencies in international consulting projects; 5) The trend towards, and consequences of, more management services included in international projects; 6) The

effects on competition when state-owned consulting firms are allowed to operate in the international market. The empirical analysis of these issues is based on a unique database of individual tender documents which Swedish consulting firms have submitted abroad.

Transfer Pricing in

International Business May 11

2021 For centuries, trade has endured stumbling blocks, mistakes, and moments of inspiration. It has contributed to the modern, globalized world in which we live, and the increasing economic, social, and political importance of trade has spawned a phenomenon called the multinational organization. However, these organizations have a national home to where profits will ultimately have to come, and in their effort to maximize the amount repatriated, they often engage in internal-pricing practices, known more commonly as transfer pricing This book reminds us all of the important issues of transfer pricing, and

how easy it is to create friction between all of the interested parties. This book also goes on to provide an insight into how such conflicts can be assuaged or avoided altogether, and explains how transfer pricing may become a managerial tool by establishing a common language that may be used as one driver for creating added value throughout the organization. Transfer pricing is not simply about maximizing income. It is a much more important strategic management issue that, treated unwisely or with ignorance, is likely to lead to an incongruity in the added value of an organization's products and services as well as its crucial return on capital employed.

[A Macroeconomic Analysis of Profit](#) Oct 04 2020 Based on the observation of economic reality, this book provides for the foundations of a new structure of national payment systems. Specifically, to this end, a rigorous accounting for

money transactions, savings, and invested profit is suggested, with a major aim to settle sustainable lending levels. Profit lies at the heart of economic activities. Indeed, companies, from small to large, seek net gains to remunerate shareholders and to increase their assets. Yet, economists are far from sharing a common theory of profit. Using mathematical tools and a discursive approach, this book contributes to the debates in such regard, in the attempt to provide new answers to old economic issues. What is macroeconomic profit? Is there any relationship between wages, lending, and profit? This book is an accessible resource for economists and financial experts as well as global economics students, researchers, academics and historians alike. It will challenge policy-makers and professionals and lead them on a thought-provoking journey through the realm of macroeconomics.
