**Human Ecology** Jun 29 2022 Human Ecology: A Theoretical Essay, by Amos Hawley, presents for the first time a unified theory of human ecology by a scholar whose name is virtually synonymous with the discipline. Focused on the interaction between society and environment, human ecology is an attempt to deal holistically with the phenomenon of human organization. Beginning in the first quarter of the century, sociologists such as Park, Burgess, and McKenzie developed the study of human ecology to account for the dynamics of change in American cities. Over time, theorists have reached beyond the boundaries of sociology, drawing on the findings of economics, political science, anthropology, and bioecology, to understand the relationship of human beings to their environment. Hawley has successfully integrated the scattered theses of this wide-ranging discipline into a schematic whole. The early human ecologists seized on the analogy of plant communities as a way of understanding urban communities. Hawley here maintains that the most important contribution to human ecology of the lexicons of plant and animal ecologies is the perspective of collective life as an adaptive process consisting in an interaction of environment, population, and organization. From the adaptive profess, he argues, emerges the ecosystem, a concept that serves as a common denominator for bioecology and human ecology. Hawley has codified the theory of human ecology by a set of deductive hypotheses that establish its claims to coherence and comprehensiveness. His model charts a synthesis of ecological concepts ranging from adaptation and equilibrium through growth in temporal and spatial

dimensions to convergence and openness. The essay underscores the critical importance of transportation and communication technology to the shaping of the human ecological system. Human Ecology brings concision and elegance to this holistic perspective and will serve as a point of reference and orientation for anyone interested in the powers and scope of the ecological approach.

**Human Dimensions of Ecological Restoration** Jul 19 2021 When it comes to implementing successful ecological restoration projects, the social, political, economic, and cultural dimensions are often as important as-and sometimes more important than-technical or biophysical knowledge. Human Dimensions of Ecological Restoration takes an interdisciplinary look at the myriad human aspects of ecological restoration. In twenty-six chapters written by experts from around the world, it provides practical and theoretical information, analysis, models, and guidelines for optimizing human involvement in restoration projects. Six categories of social activities are examined: collaboration between land manager and stakeholders ecological economics volunteerism and community-based restoration environmental education ecocultural and artistic practices policy and politics For each category, the book offers an introductory theoretical chapter followed by multiple case studies, each of which focuses on a particular aspect of the category and provides a perspective from within a unique social/political/cultural setting. Human Dimensions of Ecological Restoration delves into the often-neglected aspects of ecological restoration that ultimately make the difference between projects that are successfully executed and maintained with the support of informed, engaged citizens, and those that are unable to advance past the conceptual stage due to misunderstandings or apathy. The lessons contained will be valuable to restoration veterans and greenhorns alike, scholars and students in a range of fields, and individuals who care about restoring their local lands and waters.

**Encyclopedia of Quality of Life and Well-Being Research** Jun 17 2021 The aim of this encyclopedia is to provide a comprehensive reference work on scientific and other scholarly research on the quality of life, including health-related quality of life research or also called patient-reported outcomes research. Since the 1960s two overlapping but fairly distinct research communities and traditions have developed concerning ideas about the quality of life, individually and collectively, one with a fairly narrow focus on health-related issues and one with a quite broad focus. In many ways, the central issues of these fields have roots extending

to the observations and speculations of ancient philosophers, creating a continuous exploration by diverse explorers in diverse historic and cultural circumstances over several centuries of the qualities of human existence. What we have not had so far is a single, multidimensional reference work connecting the most salient and important contributions to the relevant fields. Entries are organized alphabetically and cover basic concepts, relatively well established facts, lawlike and causal relations, theories, methods, standardized tests, biographic entries on significant figures, organizational profiles, indicators and indexes of qualities of individuals and of communities of diverse sizes, including rural areas, towns, cities, counties, provinces, states, regions, countries and groups of countries.

**Understanding Human Development** Nov 10 2020 K. Warner Schaie I am pleased to write a foreword for this interesting volume, particularly as over many years, I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague, mentor, or research collaborator. The editors begin their introduction by asking why one would want to read yet another book on human development. They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development. This volume provides a positive remedy to past deficiencies in volumes on human development with a well-organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure. This approach does not surprise. After all, the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin, whether as students, junior scientists, or senior visitors. That institute, under the leadership of Paul Baltes, has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality. Over the past two decades, it has influenced the careers of a generation of scientists who have advocated long-term studies of human development in an interdisciplinary context.

*Creating an Ecological Society* Sep 28 2019 Aiming squarely at replacing capitalism with an ecologically sound and socially just society, Magdoff and Williams provide accounts of how a new world can be created from the ashes of the old. They show that it is possible to envision and create a society that is genuinely democratic, equitable, and ecologically sustainable. And possible--not one moment too soon--for society to change fundamentally and be brought into harmony with nature. --From publisher description.

**The Threat of Pandemic Influenza** Nov 30 2019 Public health officials and organizations around the world remain on high alert because of increasing concerns about the prospect of an influenza pandemic, which many experts believe to be inevitable. Moreover, recent problems with the availability and strain-specificity of vaccine for annual flu epidemics in some countries and the rise of pandemic strains of avian flu in disparate geographic regions have alarmed experts about the world's ability to prevent or contain a human pandemic. The workshop summary, *The Threat of Pandemic Influenza: Are We Ready?* addresses these urgent concerns. The report describes what steps the United States and other countries have taken thus far to prepare for the next outbreak of "killer flu." It also looks at gaps in readiness, including hospitals' inability to absorb a surge of patients and many nations' incapacity to monitor and detect flu outbreaks. The report points to the need for international agreements to share flu vaccine and antiviral stockpiles to ensure that the 88 percent of nations that cannot manufacture or stockpile these products have access to them. It chronicles the toll of the H5N1 strain of avian flu currently circulating among poultry in many parts of Asia, which now accounts for the culling of millions of birds and the death of at least 50 persons. And it compares the costs of preparations with the costs of illness and death that could arise during an outbreak.

*Two Worlds of Childhood* May 29 2022

Introducing Bronfenbrenner Mar 27 2022 Children learn in contexts, and the spaces, places and people they come into contact with have a deep influence on their development. Urie Bronfenbrenner's bioecological model of development places the child at the centre of this complex network, and his influence has been extensive in early childhood education. This book presents an introduction to Bronfenbrenner's model of development, drawing on practice-based research to identify and animate key elements of his model's impact. It illustrates how his model can help bring quality to early learning environments and incorporates it into daily work with young children. As well as providing a glossary of key terms, Introducing Bronfenbrenner covers areas such as: a bioecological perspective on educational transition; early education as a dynamic process; nurturing children's learning and development; reflecting the bioecological in early years practice. Using a variety of vignettes, practical examples of good practice and case studies, Introducing Bronfenbrenner is an essential guide to his work. It will be of interest to professionals working with children in early childhood settings and to undergraduate students training to become early childhood professionals.

**Art, Theory and Practice in the Anthropocene** May 05 2020 Art, Theory and Practice in the Anthropocene contributes to the growing literature on artistic responses to global climate change and its

consequences. Designed to include multiple perspectives, it contains essays by thirteen art historians, art critics, curators, artists and educators, and offers different frameworks for talking about visual representation and the current environmental crisis. The anthology models a range of methodological approaches drawn from different disciplines, and contributes to an understanding of how artists and those writing about art construct narratives around the environment. The book is illustrated with examples of art by nearly thirty different contemporary artists.

**Confronting Inequality** Mar 15 2021 "All children deserve the best possible future. But in this era of increasing economic and social inequality, more and more children are being denied their fair chance at life. This book examines the impact of inequality on children's health and education, and offers a blueprint for addressing the impact of inequality among children in economic, sociological, and psychological domains. Chapters examine a wide range of studies including exposure to stress and its biological consequences; the impact of federal programs offering access to nutrition for mothers and children; the impact of parental decision making and child support systems; the effects of poverty on child care and quality of education, parental engagement with schools, parent child interactions, friendship networks, and more. The book concludes with commentaries from leading scholars about the state of the field, and efforts to help mitigate the effects of inequality for children in the US and throughout the world"--

**The Bronfenbrenner Primer** Jul 31 2022 This is the first ever introduction to Urie Bronfenbrenner's Ecological Systems Framework written specifically for undergraduate students. The author provides a carefully structured, guided introduction to Bronfenbrenner's concepts, their interpretation, and their potential applications. Bronfenbrenner's scientific analysis of the role the environment plays in human development earned him a premier place alongside Jean Piaget, Sigmund Freud, and Erik Erikson as a contributor to our understanding of developmental processes. His ideas are essential for analysing how development happens, how it goes astray, how to right it when it does, and how to create environments that will promote healthy development. The Bronfenbrenner Primer walks students through each component of the framework in a logical order, helping students build a solid, systematic understanding. It describes the background and context that led Bronfenbrenner to develop his framework, illustrates a wide array of potential applications, and provides activities students can do to practice applying the framework to their own experience. Honed over 25 years of teaching Bronfenbrenner's ideas, this text will be essential reading for students across the behavioral and social sciences.

**Ecological Ethics** Jun 25 2019 Taking issue with the common assumption that human ethics can be 'extended' to meet the demands of the ongoing ecological crisis, Curry demonstrates that a new and truly ecological ethic is both possible and urgently needed.

**Conceptual and Methodological Approaches to Navigating Immigrant Ecologies** Oct 10 2020 This book compiles a series of empirical and conceptual chapters based on Bronfenbrenner's ecological theory as the framework for understanding the overlapping and intersecting contexts that influence different populations

of migrants in the United States and Canada. According to Bronfenbrenner's model, individuals engage in activities and relationships that directly impact them, including families, schools, and jobs (microsystems), the interrelations among microsystems like family-school (mesosystems), contexts that have an impact on the individual through indirect influences (exosystems), and the overarching cultural milieus in which members share values, beliefs, and lifestyles (macrosystems). Within this edited volume, family, school, work, media, policies, culture, and sociohistorical contexts are examined to understand their influence on immigrant groups. This edited volume also considers immigrants across development and ethnic groups to provide a comprehensive resource on the issues that currently affect immigrant groups.

Signed articles, specially commissioned for this work and authored by key figures in the field, conclude with Cross References and Further Readings to guide students to the next step in a research journey. Reader's Guide groups related articles within broad, thematic areas to make it easy for readers to spot additional relevant articles at a glance. Detailed Index, the Reader's Guide, and Cross References combine for search-and-browse in the electronic version. Resource Guide points to classic books, journals, and web sites, including those of key associations.

Concepts and Theories of Human Development Sep 08 2020 A classic in the field, this third edition will continue to be the book of choice for advanced undergraduate and graduate-level courses in theories of human development in departments of psychology and human development. This volume has been substantially revised with an eye toward supporting applied developmental science and the developmental systems perspectives. Since the publication of the second edition, developmental systems theories have taken center stage in contemporary developmental science and have provided compelling alternatives to reductionist theoretical accounts having either a nature or nurture emphasis. As a consequence, a developmental systems orientation frames the presentation in this edition. This new edition has been expanded substantially in comparison to the second edition. Special features include: \* A separate chapter focuses on the historical roots of concepts and theories of human development, on philosophical models of development, and on developmental contextualism. \* Two new chapters surrounding the discussion of developmental contextualism--one on developmental systems theories wherein several exemplars of such models are discussed and a corresponding chapter wherein key instances of such theories--life span, life course, bioecological, and action theoretical ones--are presented. \* A new chapter on cognition and development is included, contrasting systems' approaches to cognitive development with neo-nativist perspectives. \* A more differentiated treatment of nature-oriented theories of development is provided. There are separate chapters on behavior genetics, the controversy surrounding the study of the heritability of intelligence, work on the instinctual theory of Konrad Lorenz, and a new chapter on sociobiology. \* A new chapter concentrates on applied developmental science.

**Recent Theories of Human Development** Sep 20 2021 Intended as supplemental reading in courses on theories of development, this book augments traditional core texts by providing students with more depth on about two dozen recent and emerging theories that have appeared over the past 20 years. This period has seen a decline of the traditional "grand" theories that attempt to apply to all people all the time in favor of "micro theories" that focus more on individual differences, so a book like this actually points the way toward the future rather than dryly reviewing the past. In addition, the author inspects the changing ways in which the concept of "theory" itself has been interpreted during this period, and he concludes with a chapter suggesting future directions.

*Addressing Cultural Complexities in Practice* Apr 03 2020 In an increasingly diverse society, psychotherapists must be able to work effectively with a wide variety of clients, each of whom has been shaped by a different mix of cultural and social influences. Pamela Hays' popular bestseller invites readers to move beyond a one-dimensional view of identity to a nuanced understanding of the factors that enable therapist and client to interact productively. Her "ADDRESSING" framework encompasses Age and generational influences Developmental or other Disability Religion and spirituality Ethnic and racial identity Socioeconomic status Sexual orientation Indigenous heritage National origin Gender The book discusses cultural considerations as therapists typically encounter them, that is, during the chronological flow of clinical work. The author's integrated approach, grounded in the research literature, considers the complexities of real-life clinical practice. In this new edition, readers will find up-to-date information on the

DSM-5, ICD-10, and upcoming ICD-11, as well as new sections on working with people in poverty, children, and transgender people; trauma-informed care; and the applications of mindfulness. The practical suggestions and tools in this book apply to assessment, testing, diagnosis, and psychotherapy and are illustrated with a rich variety of case examples. Each chapter ends with a Key Ideas summary and a Practice Exercise that can be used in education and supervision.

**Principles of Clinical Medicine for Space Flight** Aug 08 2020 In its first edition, *Principles of Clinical Medicine for Space Flight* established itself as the authoritative reference on the contemporary knowledge base of space medicine and standards of care for space flyers. It received excellent notices and is used in the curricula of civilian and military training programs and used as a source of questions for the Aerospace Medicine Certifying Examination under the American Board of Preventive Medicine. In the intervening few years, the continuous manning of the International Space Station has both strengthened existing knowledge and uncovered new and significant phenomena related to the human in space. The Second Edition incorporates this information. Gaps in the first edition will be addressed with the addition new and revised chapters. This edition is extensively peer reviewed and represents the most up to date knowledge.

Provides research-based insight into how an environment can impact mental and physical health and well-being Integrates core psychological constructs, such as coping, place attachment, social support, and perceived control into each environment discussed Includes discussion of Kaplan's Attention Restoration Theory and Ulrich's Stress Reduction Theory Covers educational settings, workplace settings, environments for active living, housing for the elderly, natural settings, correctional facilities, and more

Development as Action in Context Feb 11 2021 Most contributions to this volume originated as papers given at an inter national conference on Integrative Perspectives on Youth Development held in Berlin (West) in May, 1983. This conference was part of a 6-year longitudinal research program on the causes of substance use among adolescents in Berlin, which is now in its fourth year. The conference title deliberately did not refer to substance use. However, its relevance to an explanation of drug-related problem behavior was made evident to everyone invited to the conference. The search for integrative perspectives in youth development originated in a dilemma that became obvious during the planning of intensive research on concomitants of substance use. In the methodology for research on youth development, there were two lines of thought that seemed completely unrelated to each other: One line of thought was oriented toward the person, leaving situational aspects aside, while the other concentrated on ecological or situational determinants and thus neglected the aspects of development and internal processes. The integration of both these directions seemed to be an unusually promising approach for any project that aimed to understand changes in the individual within a rapidly changing urban setting. The best way to come closer to a resolution of that dilemma seemed to be an intensive exchange between the American and European scientific communities on this issue.

*The Routledge Handbook of Digital Literacies in Early Childhood* Oct 29 2019 As fast-evolving technologies transform everyday communication and literacy practices, many young children find themselves immersed in multiple digital media from birth. Such rapid technological change has consequences for the development of early literacy, and the ways in which parents and educators are able to equip today's young citizens for a digital future. This seminal Handbook fulfils an urgent need to consider how digital technologies are

impacting the lives and learning of young children; and how childhood experiences of using digital resources can serve as the foundation for present and future development. Considering children aged 0–8 years, chapters explore the diversity of young children’s literacy skills, practices and expertise across digital tools, technologies and media, in varied contexts, settings and countries. The Handbook explores six significant areas: Part I presents an overview of research into young children’s digital literacy practices, touching on a range of theoretical, methodological and ethical approaches. Part II considers young children’s reading, writing and meaning-making when using digital media at home and in the wider community. Part III offers an overview of key challenges for early childhood education presented by digital literacy, and discusses political positioning and curricula. Part IV focuses on the multimodal and multi-sensory textual landscape of contemporary literary practices, and how children learn to read and write with and across media. Part V considers how digital technologies both influence and are influenced by children’s online and offline social relationships. Part VI draws together themes from across the Handbook, to propose an agenda for future research into digital literacies in early childhood. A timely resource identifying and exploring pedagogies designed to bolster young children’s digital and multimodal literacy practices, this key text will be of interest to early childhood educators, researchers and policy-makers.

*Ecological Engagement* Apr 27 2022 This book presents the method developed by Dr. Silvia Helena Koller and her students and collaborators to apply Urie Bronfenbrenner’s Bioecological Theory of Human Development to empirical studies with children and adolescents. Although Bronfenbrenner's theory, in different stages of development, has been widely cited by several researchers, surprisingly little has been written about the theory itself, its evolution or about the methods that should be used to test it. This book fills this gap by presenting both an overview of Bronfenbrenner’s theory and a method to apply it to empirical research, the Ecological Engagement method. The book also shows how this method can be applied in practice by bringing together a series of research reports of studies carried out in different regions of Brazil and in Angola that used the Ecological Engagement method to study children and adolescent development in different contexts, such as street situation, sexual exploitation, institutional reception, family reintegration, school and emergency and disasters, among others. Ecological Engagement – Urie Bronfenbrenner’s Method to Study Human Development will be a valuable tool for psychologists and other social scientists interested in child and adolescent development looking for a solid an innovative methodology that allows researchers to directly interact with their research subjects in their own social contexts in order to fully understand their problems and issues. “The methodology of Ecological Engagement, that is explained and richly empirically illustrated in this book, is a singularly significant extension of [Urie Bronfenbrenner’s] bioecological model. Indeed, in my view it is a brilliant empirical instantiation of the PPCT component of the model. (...)
